

# BIODEGRADABLE STICKY CARDS

## WHAT?

To prevent a plague, it is important to detect it in time. Sticky cards are very suitable for detecting, identifying and possibly controlling plagues.

Our sticky cards have a strong, non toxic glue on both sides. Next to our regular (paper & plastic) sticky cards we now have **biodegradable** ones as well. This means that they can be broken down naturally by fungi and bacteria after use.

## WHEN?

- With sticky traps you can monitor if you have a plague coming up or which insects you have flying around. With this information you can determine if it is necessary to upscale the amount of sticky traps or if you want use biological pesticides.
- Do you have a plague? With **sticky traps** you reduce the plague pressure.

## WHY?

Biodegradable sticky cards can be recycled along with the crops. This means you reduce the different waste streams, this can in the end save costs.

## DETAILS

- The sticky cards are available in three sizes. We are here to inform and advise you on what size to choose.
- Those biodegradable sticky cards are like the regular ones also available in different colours to detect or catch different insects.

## CONTACT US!

Do you have any questions in regards to biodegradable sticky cards? Or would you like to receive more information? It would be my pleasure to help you
